

Benefits of Goalscape Online

Single user

Even for a single user working on solo projects, Goalscape Online has several advantages over desktop software, including convenience and security. You can read and update your online projects from any computer anywhere in the world without needing to download any software; and losing your equipment (eg by having a laptop stolen or suffering a hardware crash), does not mean losing all your work.

Goalscape Online works in any major browser on any desktop or laptop computer and on some tablets: access is via a single-screen sign-in process (accessed by username and password). It uses Secure Socket Layer (SSL) for secure server communications. Users can also access their online projects using the Goalscape Mobile app (for all [Android](#) and [iOS](#) phones and tablets).

Multi-user

Goalscape Online is perfect for businesses, organizations and anyone working in teams on shared projects – especially those in separate geographical locations. As well as Goalscape's uniquely intuitive and engaging visual format, the online application also delivers significant additional benefits for project collaboration:

- Visually display the entire goal structure, priorities and progress in a single immediately understandable image.
- Focus View ('zoom in' to see the detail on any area)
- The shared project is always the latest version – no version management or impact analysis required on updates.
- Project administrators can set access privileges for participants individually (View, Edit, Admin)
- Anyone working on a shared project can see who else is in it and what they are doing (with appropriate warnings about simultaneous updates to the same goal)
- Goals updated by others are identified by bold names in the goal map until read
- You can roll out a central organizational model and work with people in different locations to build their own specific implementations: ideal for distributed teams and remote coaching
- Goal Comment: instant messaging on individual goals, with in-line attachments and email notification options.

So Goalscape Online provides a new way of sharing project information, yet fits in with the way you work right now. When you receive an email notification you can archive it, send a reply (which will appear as a new Comment on that goal), or click a link to go to the online project to see the *context* for the goal – and its entire Comment history.

Goalscape Free users can create 1 personal project (30 goals maximum) and share it with others (Edit or View access). They can also be given Edit access to 1 project shared with them and View access to any number of projects. Inviting someone to share a project creates a new account for them and they receive an email notification.

Goalscape Unlimited users can create an unlimited number of projects of unlimited size and share them with an unlimited number of others – they can even give Free users Edit access to large projects (1 large editable project per Free user). Goalscape Online Unlimited subscriptions are just \$6 per month or \$66 per year – purchase [here](#).
