

Goalscape Enterprise Summary

Goalscape Enterprise uses Goalscape's uniquely intuitive and engaging visual format and provides additional project view and collaboration features. It is ideal for corporations that need to ensure the highest levels of data security when working in teams on shared projects.

- Visually display the entire goal structure, priorities and progress in a single immediately understandable image
- Focus View ('zoom in' to see the detail on any area)
- The shared project is always the latest version – no version control issues. Everyone can access it the same time (with warnings about simultaneous updates to the same goal)
- Goals updated by others are identified by bold names in the goal map
- Gantt View
- Change Tracker
- Manager Dashboard for system administration and user account management
- Project owners and admins can set access privileges for team members (View, Edit, Admin) on a *per-project* or *per-goal* basis: Admins can share an entire project or different areas of that project with specific individuals or groups
- Admins can display or hide certain project information (such as who else is working on it and what they are doing) according to user access level
- Goal Comment: instant messaging on individual goals, with email notification options
- Shared attachments in any file format (including video)
- Reporting in pdf, docx, xlsx, csv
- Import from/Export to Microsoft Project and mindmapping applications
- Goal marking ('traffic lights'), color-coding and context-based Tags
- Highlight goals by Date, Responsibility or Tag (or any combination of these attributes)

Goalscape Enterprise provides a powerful new way of sharing project information, yet fits in with the way you work right now. There are two different implementations:

- **SaaS private cloud application** (minimum 4 users)
Implemented on your dedicated hardware and software in our secure server environment.
- **Corporate Intranet installation** (minimum 10 users)
Installed on your internal intranet, behind your firewall.

Pricing is based on a per-user license fee with a scale of discounts according to deal size, plus a one-time setup fee. For the SaaS version there are Annual Server fees (charged at cost); for the Corporate Intranet version there is a separate Service Level Agreement to cover support, updates and patches.

Contact sales@goalscape.com for more details. If you would like a full price proposal please indicate the version you require and the total number of users.
